COURSES

BACK END DEVELOPMENT AND APIS

FREECODECAMP

Issued on: July 17, 2022

JAVASCRIPT ALGORITHMS AND DATA STRUCTURES

FREECODECAMP

Issued on: July 8, 2022

RESPONSIVE WEB DESIGN

FREECODECAMP

Issued on: October 25, 2021

PROJECTS

1. SOCIAL MEDIA APP FOR SHARING MEMORIES

[am-memories.herokuapp.com](#)

- The frontend part was made with React. React-router is used to create frontend routing.
- Redux-toolkit is used to manage the state.
- The backend was developed using Node. Express is used to create the API.
- MongoDB is used as database and Mongoose used to handle the database.
- User authentication is developed using JWT.
- Other important packages: axios, jwt-decode, moment, bcrypt, compression, cors, joi, lodash. dotenv etc.

2. BALLOON STRUCTURE DESIGN TOOL

[asad13.github.io/Balloon-structure-design-tool](#)

- The designing logic is created with Javascript.
- SVG is used to create the balloons(design structure) and is dynamically created with Javascript based on the structure selected by the user.
- SASS is used to create the styling.

3. LANDING PAGE OF A TRAVEL WEBSITE

[asad13.github.io/Travel-Website-Home-Page](#)

- The webpage is created with HTML5, CSS3 and Vanilla Javascript.
- Completely Responsive and Cross-browser compatible with post carousel and cool hover effect.
